

User Guide - Remedial Mathematics Educational Resources

About this program

This program allows you to access remedial mathematics educational resources directly on your computer, without needing a constant internet connection (after the initial download).

Minimum requirements

- **Disk space:** At least 5 GB of free space on the drive where you install the program
- **Operating system:** Windows 7 or newer
- **Internet:** Required only for the initial download of resources

Installation and usage steps

1. Downloading the file

Download the `start_server.bat` file from the address provided by your administrator and save it to your computer.

2. Choosing the installation location

Copy the `start_server.bat` file to a location on a drive that has **at least 5 GB of free space**. For example: - C:\EducationalResources\ - D:\RemedialMath\ - Any other folder of your choice

Important: All educational resources (video files, PDFs, images) will be downloaded to the same folder where `start_server.bat` is located.

3. Starting the program

1. Open the folder where you copied the `start_server.bat` file
2. Double-click on the `start_server.bat` file
3. A black window (command line) will appear - **do not close this window!**

Important note about Windows Firewall

On first run, Windows will ask if you allow the `caddy.exe` program to run on your computer. It is **very important** to click the **“Allow access”** button.

- `caddy.exe` is the web server that allows you to access the educational resources
- Without this permission, the program will not work correctly
- This prompt will only appear on the first run

4. Downloading resources (first run)

On first use, the program will: 1. Check if you have the latest version of the educational resources 2. Download all necessary materials (this process may take **5-15 minutes**, depending on your internet speed) 3. Extract the files to the current folder

During download, you will see: - Messages in Romanian about download progress - Colored notifications (blue for information, green for success) - A progress bar during file extraction

Be patient! The educational resources contain many video materials and documents, so the initial download may take several minutes.

5. Accessing the educational resources

After the download and extraction are complete, you will see the message:

Aplicatia a pornit cu succes. Poate fi accesata dintr-un browser web la adresa `http://localhost:8090`

(Translation: "The application has started successfully. It can be accessed from a web browser at `http://localhost:8090`")

How to access the resources: 1. Open your preferred web browser (Google Chrome, Firefox, Edge, etc.) 2. In the address bar, type: `http://localhost:8090` 3. Press Enter 4. You will see the main page with all available educational resources

Note: The black window (command line) must **remain open** as long as you want to access the resources.

Daily use

After the first installation, the process is much simpler:

1. Double-click on `start_server.bat`
2. Wait 5-10 seconds (the program checks for updates)
3. Open your browser and go to `http://localhost:8090`
4. Work with the educational resources

Automatic updates: Each time you start, the program checks if there are new versions of the educational resources. If there are, it will download them automatically.

Stopping the program

You have **two options** to stop the server:

Option 1: Using `stop_server.bat` (recommended)

1. Double-click on the `stop_server.bat` file (located in the same folder)
2. The server will be stopped automatically and safely
3. The black window will close

Option 2: Manual shutdown

1. Go to the black window (command line) where the server is running
2. Press Ctrl + C on your keyboard
3. If asked for confirmation, type Y (Yes) and press Enter
4. Close the window

Note: The server will stop automatically when you restart your computer.

Error scenarios and solutions

Error: “EROARE: Nu s-au putut descarca fisierele” (Could not download files)

What it means: The program failed to download the required files, even after 3 attempts.

Solutions: 1. **Check your internet connection** - make sure you are connected to the internet 2. **Check your firewall or antivirus** - these may be blocking downloads 3. **Try again** - run `start_server.bat` again 4. **Contact your administrator** - if the problem persists, there may be an issue with the download server

Error: “Bind: Only one usage of each socket address...”

What it means: Port 8090 is already being used by another program or the server is already running.

Solutions: 1. **Check if the server is already running** - look for a black window with a title containing “start_server” 2. **Stop the existing server** - use `stop_server.bat` or close that window 3. **Restart your computer** - this will free all occupied ports

Error: Page doesn’t load in browser (localhost:8090 not working)

What it means: The browser cannot communicate with the local server.

Solutions: 1. **Check the black window** - it must be open and display “Aplicatia a pornit cu succes. Poate fi accesata dintr-un browser web la adresa `http://localhost:8090`” 2. **Check the address** - make sure you typed correctly: `http://localhost:8090` (not `https://`) 3. **Try another browser** - test with Google Chrome, Firefox, or Edge 4. **Check your firewall** - make sure you allowed access for `caddy.exe` on first run 5. **Restart the server** - stop the server (Ctrl+C) and run `start_server.bat` again

Error: Insufficient disk space

What it means: There is not enough free space to download all resources.

Solutions: 1. **Free up space** - delete temporary files or move other documents to another drive 2. **Choose another location** - move `start_server.bat` to a drive with more available space (minimum 5 GB) 3. **Check available space** - right-click on the drive → Properties

Program closes suddenly or “disappears”

Solutions: 1. **Check if an antivirus is blocking execution** - some antiviruses may block caddy.exe 2. **Run as Administrator** - right-click on start_server.bat → “Run as administrator” 3. **Check for error messages** - read the messages in the black window carefully before it closes

Frequently asked questions

Q: Do I need to leave the computer on all the time? A: No. You can stop the server when you’re not using it and restart it when you need the resources.

Q: Can I access the resources from other computers on the network? A: No, in the default configuration, resources are only available on the computer where the server is running (localhost).

Q: How much space do the educational resources take? A: Approximately 3-4 GB, due to video materials and high-quality PDF documents.

Q: Do I need to be connected to the internet all the time? A: No. Internet connection is required only for: - Initial download of resources - Checking and downloading updates
After the resources are downloaded, you can work offline.

Q: What do I do if I see messages in English? A: Some technical messages may appear in English. If you see an error message you don’t understand, contact your administrator or consult the “Error scenarios” section above.

Q: Can I delete the folder after I’m done? A: Yes. When you no longer need the resources, you can delete the entire folder where you installed the program. Nothing will remain on your computer.

Technical support

If you encounter problems that are not covered in this guide, please contact your system administrator or the person responsible for educational resources in your institution.
